

The original Transparent Speaker is built by high quality materials and components. It's size and performance is sufficient to fill any living room with loud and great sounding music.

This speaker has been praised for its design and its audio quality. Rich bass, clear mid range and crisp highs, our speaker aims to produce a "transparent sound", which means to have a neutral tuning and stay true to the recording. The front panel does however offer controls for any further adjustments, seems like some people need a bit more bass in their lives.

PRODUCT SPECIFICATIONS

Dimensions (mm): 420 × 330 × 106

Weight: 11 kg

L/R Drivers: 2 × 3" (Full Range)
