Re e Regina, Bobo Piccoli

Inspired by the game of **chess**, with their soft and sinuous shapes, **Re and Regina** are the key characters of the chessboard. Their profiles stand out clearly in the white light diffused by the opalescent glass.

Vertical **Re**, screwed around a large circumference, horizontal **Regina**. They can be placed side by side, or recalled from different points in an environment, or even proceed independently, each of these lamps has its own personality.

Floor or table, coffee table or desk, both **Re and Regina** have the spatial presence to create a context.

The dimmer that allows you to modulate the light makes it a surreal element with different degrees of intensity: an element of representation that releases energy into space when the light is bright, an abstract and restful work when the light is soft and low. Glass sculptures during the day in environments illuminated by natural light.

Inspired by the history of art, from Cosmè Tura to the Flemish interiors of Jan Van Eyck to the conceptual imagery of Marcel Duchamp who practices the game of sacks as a lifestyle, **Re and Regina** are Cartesian axes of a universe that crosses eras and cultures.
